

Redefining What “Partnership” Means

“Byte Sized Solutions is far and away the most accomplished and productive company that I’ve worked with in terms of the number of projects, quality of work done and improving the customer EHR integration experience – they stand alone.”

—Stanley Crane
Healthcare Information
Technology Industry Expert

Byte Sized Solutions is the Go-to Partner for Custom EHR Integration Projects

Most EHR vendors excel at providing basic functionality and government compliance, but often look to partners to help develop innovative features. Byte Sized Solutions provides an effective model for how partnerships can work in the complex world of Electronic Health Records (EHR).

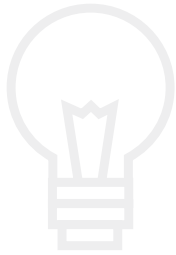

Byte Sized Solutions has worked on EHR integration projects for their clients since 2004. Based on their deep knowledge and success rate, vendors began approaching Byte Sized Solutions to participate in their open API training programs.

From that point forward Byte Sized Solutions and their EHR partners became true collaborators with a common goal of finding new and increasingly more effective ways to improve the stability and functionality of their API's: while creating innovative applications that benefit everyone – partners, provider organizations and patients.

Stanley Crane talks about Byte Sized Solutions on...

...Partnership

“Sometimes people think “partnership” means “you do what I say”- but the partnership with Byte Sized Solutions has been truly collaborative. What they have been able to do has been astounding to me. When you build a tool kit with an open API you hope that people will build useful things with it. You know you have a great API when people build things that surprise you and that you didn't know were possible. Byte Sized Solutions was able to do that time and time again.”

Stanley Crane talks about Byte Sized Solutions on...

...Innovation

“So where do creative solutions come from? If a practice has a specific need or someone has a great idea, how does that get turned into reality? Big EHR vendors are busy doing other things like MIPS and MACRA and meaningful use, so where does innovation come from? It comes from creative thinkers like Byte Sized Solutions.”

...Integration and Deliverability

“The remarkable delivery by Byte Sized Solutions allowed us to say yes to our clients when they had requests for new features or functionality. We have worked with other companies that tried to integrate with our products without using our open API, causing enormous problems, but Byte Sized Solutions had a vision a long time ago to commit to using our open API. Working with Byte Sized Solutions, we were able to develop certified products that bolts onto the side of the EHR to meet the needs of the customer and deliver the open functionality that they’re really after. And that’s what Byte Sized brought to the party, and frankly they’ve done it more than any other company I’ve worked with.”

“Our partners are able to deliver a better, more reliable product based on the work that we did with open API’s. Our partnerships have allowed Byte Sized Solutions to guide clients through difficult projects and gave Stanley the confidence that the results will be far superior than other vendors.”
